

# Metro Ethernet Transport Service

### Overview:

Ethernet Transport Service (ETS) is a high speed data transport service that provides end-to-end transmission using Ethernet packet technology at transport speeds ranging from 5 Mbps to 1 Gbps. ETS is ideal for transport of broadband multimedia traffic (i.e., voice, data, and video). Additionally, you can interconnect multiple locations using GTA's ETS network.

### Services:

- Higher bandwidth speeds for voice, data, and video.
- Incremental bandwidth speeds: 5 Mbps to 1Gbps.
- Supports both copper and fiber mediums.
- Offers a mix of services from point-to-point to multi-point connections.
- Provides for LANs (MPLS Layer 2) and WANs (MPLS Layer 3)

### Benefits of Metro Ethernet Transport Service:

Ethernet Transport Services provides numerous benefits for your company. ETS can lower your costs by reducing the need for in-house transport technical staff. Secondly, it allows you to implement a solution that can scale to support business as it grows. ETS also eliminates the need to purchase or manage transport Customer Premise Equipment (CPE). And with GTA ETS, you backed by expert technicians on a 24x7 basis.

### Ethernet Service Advantage:

Ethernet Service delivers superior dedicated bandwidth and service for your private network at a reduced cost. Plus, Ethernet make private network interconnectivity simple. Enjoy LAN speeds across your multi-facility network – without the cost and responsibility of purchasing, configuring and managing additional transport equipment.
