

High Speed Information Data Services (T1)

Overview:

High Speed Informational Data service is a T1 Internet access which provides a constant, steady connection. This service provides the ability to video conference, quickly transfer large files, and conduct other bandwidth intensive tasks.

Services:

Features include:

- Local Area Networking – for file sharing and intra-office communications.
- T1 loop technology – for reliable, always on connection.
- Priority Business Support
- 8 Static IP addresses – Host email, Web, VPN or FTP servers
- Professional Installation – by highly trained technicians.

Benefits of Dedicated Internet Access (DIA):

- Provides dedicated, clear-channel, point-to-point connections.
- Offers expanded CPE options and managed router services.
- Includes Service Level Agreements on all DIA lines.
- Provides high-quality, reliable data transfers over GTA's facilities-based Internet network.
- Offers complete solutions that include circuit and equipment ordering, installation, 24 x 7 customer support and proactive network monitoring, and single invoice billing.
